

Professional Technician's Seminar Series

PTS71: Diagnostic Strategies

- This new seminar is designed for the automotive driveability technician that must diagnose a variety of problems to multiple makes of vehicles.
- This course uses field developed techniques designed to shorten diagnostic time.
- Develop a winning strategy for tough diagnostic problems.
- Add new ideas to your diagnostic toolbox.

Here's what's included:

This one-night interactive training program includes contributions from technicians, tech line personnel, and the PTS trainers. It will focus on strategies to identify which service information and test data is needed, determine an initial direction, validate the direction, identify the root cause, and verify the repair of the following:

- No Start
- Hesitation or Surge
- Lack of Power
- Misfire
- Rough Idle and Stalling

These Top Tech Line Topics will be covered:

- This vehicle won't start and it won't talk to my scan tool either. How am I supposed to diagnose it?
- I have a P0300 on this car. How do I tell where the miss is?
- This car doesn't accelerate like it should. The fuel pressure is OK. What's next?
- This engine stalls and there are no codes. It looks like it has drive by wire. How do I diagnose it?
- Another EVAP code! How do I know when it set?
- How do I diagnose an intermittent problem without losing my shirt?
