

Professional Technician's Seminar Vehicle System Series

PTS83: New Vehicle Technologies

- This one night seminar will introduce new technologies used on today's vehicles.
- Be prepared for the future and let your customers know you will be there.
- See the new technologies and how they are used on vehicles you may be servicing now.

Here's what's included:

The technologies covered in the class are not a future dream, they are here today. Today's shop must prepare to face these systems and dozens of newer ones. You might not be servicing these systems yet, but many of your customers know about them through television and magazine ads. This class will introduce the technology with examples of how it has been implemented on 2009 vehicles. Equipment and training requirements will be explored. This class will help you and your shop to discuss these new technologies with their customers and prepare for service opportunities in the future.

- Gasoline Direct Injection
- Variable Cylinder Management
- Blue-Tec Diesel
- Telemetrics
- Vehicle Stability Control
- Tire Pressure Monitoring Systems

What You Will Learn:

- Equipment, Safety, and service requirements of new technologies
- New terminology and systems
- How the new technology affects fuel economy and performance
- Future service opportunities
